A step forward for light production

Experience the latest in
fast performance and true
production versatility.

Diverse production credentials

Built to play an integral role in CRD, Print for Pay and Commercial Print environments, the imageRUNNER ADVANCE Light Production range offers outstanding production possibilities. For those seeking colour, the imageRUNNER ADVANCE C9280 PRO delivers 70 ppm in colour – as well as 80 ppm in black and white. For specialist black and white production environments, the imageRUNNER ADVANCE 8200 series consisting of the imageRUNNER ADVANCE 8285 PRO, 8295 PRO and 8205 PRO offers speeds of up to 105 ppm.

With intuitive touch-screens and faster warm up times with Canon's on-demand fixing technology, this is a range built to meet a diversity of light production needs.

Powerful workflow

For the most demanding production environments there's a new alternative to our proven EFI on-board controller. An external EFI based server features Fiery System 10, delivering powerful workflow integration, time saving production shortcuts and high-end colour capabilities where they're needed.

Ever dependable

Building on the high reliability levels of its predecessor, the imageRUNNER ADVANCE Light Production range incorporates Canon's eMaintenance, allowing automated meter readings, consumables ordering and remote diagnostics to be undertaken. And with the ability to load media and toner during operation, these are systems ready for tough turnarounds.

Quality in every respect

Whatever the scope of each production project, the imageRUNNER ADVANCE Light Production range delivers quality levels that set it apart, incorporating a wealth of image expertise. Colour jobs are produced with vibrant colours whilst black and white text, and graphics are crisp and consistent. Diverse media handling and high-end finishing options – such as booklet making, professional punching and advanced folding capabilities – ensure prints exceed the highest expectations.

Building on the renowned reputation of its predecessor, the imageRUNNER ADVANCE Light Production range raises the bar. Combining consistent high quality prints with dependable performance, these systems offer new levels of production versatility. Allowing your customers to benefit from a wealth of print services at deadline-beating speeds.

Versatility that sets new standards

Whatever your requirements, our imageRUNNER ADVANCE Light Production range is designed to deliver. Thanks to the highly modular design, there is a perfect solution for every production, space and budgetary requirement.

Superb media handling and finishing

Provide your customers with a wealth of choice courtesy of the incredibly flexible media handling capabilities of these systems. Uncoated stocks, gloss media, a maximum standard paper size of SRA3 (or 330.2 x 487.7 mm for irregular size) plus weights up to 300 gsm, provide extensive possibilities.

An array of finishing options stand up to close scrutiny against even high end production engines. Professional punching (21-hole plastic comb, twin loop, colour coil, velo bind, loose leaf and Pro Click), folding (Z-folding, inner-C, outer-C, double parallel and centre folding), inserting and saddle finishing with trimming, are all easily achievable. Allowing you to offer exceptional choice to your customers.

Simple yet sophisticated

From an operator's perspective, managing the daily workload could not be simpler. A huge adjustable colour touch-screen makes even complex tasks easy to control. With the help of Canon's Workflow Program, you can use the imageRUNNER ADVANCE Light Production range to maximise the efficiency and effectiveness of your operation. Integration with HELIX Production Workflow and Océ PRISMA® solutions enables significant, additional time and cost saving benefits, with features such as on-line ordering, job ticketing, and direct integration with Variable Data applications.

The modular design of these systems ensures investment security for years to come.

Double Parallel Fold

A huge 26.4 cm (10.4 inch) adjustable and intuitive colour touch-screen makes even complex tasks easy to control.

Advanced thinking means quality results

The strategy behind the design and development of the imageRUNNER ADVANCE Light Production range is to deliver quality that satisfies all your light production needs. Beneath the modern styling and beyond these production credentials, lies a depth of innovative thinking that sets new standards in environmental responsibility.

High image quality

Numerous innovations help deliver the highest print quality. Within the light production colour printer imageRUNNER ADVANCE C9280 PRO, Canon's pQ toner system expands the colour reproduction area, providing great fusing and gloss performance at 1200 x 1200 dpi resolution. Canon's ARCDAT real-time calibration technology also ensures colours are produced consistently, automatically measuring and fine-tuning image density during operation.

The black and white light production printer of the imageRUNNER ADVANCE 8200 PRO Series incorporates image segmentation and 1200 x 1200 dpi black and white halftone screening. This ensures text, halftone and photographic images are accurately reproduced without the banding problems that other devices may sometimes experience.

Impressive prints

The image quality, extensive media handling capabilities and professional finishing possibilities ensure there's a significant range of applications to offer both existing and new customers.

Create eye-catching company brochures or stunning mailpieces using variable data techniques to drive home targeted messages. Deliver on-demand digital proofs to speed-up project approval. Or produce monthly financial statements and manuals that consistently impress.

Outstanding environmental credentials

The imageRUNNER ADVANCE Light Production range incorporates high-grade fire retardant bio plastic, and, wherever possible, recycled plastics have been utilised. As you would expect, each system is ENERGY STAR® qualified and, thanks to Canon's on demand fixing technology, offers very competitive TEC* ratings. Furthermore, useful features such as Auto and Weekly shutdown cut wastage, culminating in a range with the most impressive environmental credentials.

The imageRUNNER ADVANCE Light Production range delivers both quality and strong environmental credentials.

Create in colour:

Eye-catching company brochures

Stunning mailpieces

On-demand digital proofs

Business cards

Posters

Training collateral

Create in black and white:

Detailed personalised invoices

Product manuals

Bulletins/Newsletters

Mailings/Letter mailing
